CARTHAGE DRY GOODS

Can't make up your mind which electric heating system is best for you?

Let us help you make the right choice!

When selecting an electric heating system, it is important to consider several factors to ensure the best fit for your needs. Here are some considerations to help you in choosing the right system:

1. **Cost Efficiency**: Electric heating systems are generally more cost-effective in the long run due to lower energy costs compared to gas or oil systems.

2. **Ease of Installation**: Electric heating systems can be installed with minimal disruption to your existing plumbing and heating systems.

3. **Controls and Thermostats**: These can provide greater control over the heating system's temperature and energy usage.

4. **Space Considerations**: Electric heating systems are ideal for spaces without existing ductwork or for those looking to upgrade their heating options.

5. **Environmentally Friendly**: Electric heating systems are associated with lower CO2 emissions compared to fossil-fuel powered systems.

A special heating rate is available now—just ask at the equipment of selected local stores for more information.
