**Library To Be Painted**

Pamela County Commissioners agreed Monday morning to pay $1,000 to the county library to purchase $1,000 worth of paint to make the library more attractive to the public. The library is part of the county's libraries system and has been closed for several years due to budget cuts. The money will be used to purchase paint and other materials to improve the library's appearance. The commissioners also authorized the purchase of additional paint as needed to continue the project. The new paint will give the library a fresh look and help attract more visitors. The library is an important resource for the community and plays a vital role in promoting literacy and education. The investment in the library is a demonstration of the county's commitment to providing quality services to its citizens. The project is expected to be completed by the end of the year.

Businesses Burglarized

The local business community is in shock and disbelief after a series of break-ins and thefts targeting local businesses. The latest incident occurred early one Saturday morning when the local hardware store was broken into and several tools were stolen. The business owner, who happened to be in the store at the time, discovered the burglary upon returning to the store. The local police department is investigating the crime and has set up an increased presence in the area. The business owner is offering a reward for information leading to the arrest of the culprits.

County Court News

The County Court has ruled in favor of the local farmer in a dispute over the use of water rights. The farmer had been facing legal challenges from neighboring landowners who claimed the farmer was using too much water for his crops. The court ruled that the farmer was using water within legal limits and ordered the neighboring landowners to cease their legal challenges.

If you have decided to install central air conditioning, here are some facts you should know about gas air conditioning:

- Gas cooling is dependable. Central gas air conditioning systems use the famous blue flame, which doesn't cool. There is no compressor to burn out, no pistons that wear down, and no moving parts to freeze up in the winter. Because of its other simplicity of design, a gas system maintains its original cooling capacity year after year.
- Gas cooling is durable. The quality construction of a central gas system means that you have fewer maintenance worries. Look inside a gas system and you'll find more stainless steel parts than in any other system. And there are only three moving parts in the entire system, thus reducing the need for extra maintenance.
- Call your Servel gas air conditioning dealer for a free survey. Before you buy any central air conditioning system, get a free survey of your home from a Servel gas air conditioning dealer. Call your local gas company for the name of the dealer nearest you.
