Catch the silent thief.

There is no pain, so you do not feel it. There is no redness, itching or tell-tale signs, so you cannot see it in the mirror. There are no flashing lights, spots or flashes, so you do not notice it. But there will be loss of sight. If glaucoma goes unchecked!

Glaucoma (elevated pressure that taxes the eye) is silently destroying your vision of sight without you, and after vision becomes irreversible.

In advanced cases, patients may notice blurred vision and a deterioration of vision. In these cases, treatment is essential for reversal.

Glaucoma is usually treated with medication and laser therapy. The earlier the treatment, the better the outcome.

If you are over 40, see your ophthalmologist or optometrist every two years to be checked for glaucoma. And especially after age 50. Don't let the pressure build. Losing your vision is pressure you can live without.

Medicare and Medicaid accepted.
